CERTIFICATE

This is to certify that the Internship titled "**Event Planning Service**" carried out by **Mr. Vikas K R**, a bonafide student of East West Institute of Technology, in partial fulfillment for the award of **Bachelor of Engineering**, in **COMPUTER SCIENCE AND ENGINEERING** under Visvesvaraya Technological University, Belagavi, during the year 2022-2023. It is certified that all corrections/suggestions indicated have been incorporated in the report.

The project report has been approved as it satisfies the academic requirements in respect of Internship prescribed for the course Internship / Professional Practice (18CSI85)

OFFER LETTER PROVIDED BY THE COMPANY

Date: 11th

Internship Offer Letter

August, 2023

Name: Vikas K R

USN: 1EW20CS146

Placement ID: FSWDTIE0408263

Dear Student,

We would like to congratulate you on being selected for the Full Stack Web Development Internship position with Compsoft Technologies, effective Start Date 11th August, 2023, All of us are excited about this opportunity provided to you!

This internship is viewed as being an educational opportunity for you, rather than a part-time job. As such, your internship will include training/orientation and focus primarily on learning and developing new skills and gaining a deeper understanding of concepts of Full Stack Web Development through hands-on application of the knowledge you learn while you train with the senior developers. You will be bound to follow the rules and regulations of the company during your internship duration.

Again, congratulations and we look forward to working with you!.

Sincerely,

Nithin K. S

Project Manager

Compsoft Technologies

No. 363, 19th main road,

1st Block Rajajinagar

Bangalore - 560010

A C K N O W L E D G E M E N T

This Internship is a result of accumulated guidance, direction and support of several important persons. We take this opportunity to express our gratitude to all who have helped us to complete the Internship.

We express our sincere thanks to our Principal, for providing us adequate facilities to undertake this Internship.

We would like to thank our Head of Dept – branch code, for providing us an opportunity to carry out Internship and for his valuable guidance and support.

We would like to thank our (Lab assistant name) Software Services for guiding us during the period of internship.

We express our deep and profound gratitude to our guide, Guide name, Assistant/Associate Prof, for her keen interest and encouragement at every step in completing the Internship.

We would like to thank all the faculty members of our department for the support extended during the course of Internship.

We would like to thank the non-teaching members of our dept, for helping us during the Internship.

Last but not the least, we would like to thank our parents and friends without whose constant help, the completion of Internship would have not been possible.

**VIKAS K R
1EW20CS146**

ABSTRACT

The modern world thrives on meaningful gatherings, from weddings and corporate conferences to cultural festivals and social celebrations. Effective event planning is essential to ensure these occasions are memorable and flawlessly executed. This abstract introduces an innovative event planning service dedicated to simplifying the entire process, ultimately transforming visions into reality.

Our Event Planning Service embraces a comprehensive approach to event management, encompassing meticulous pre-event preparations, on-site coordination, and post-event evaluation. It leverages cutting-edge technology, creative expertise, and a network of trusted vendors to deliver exceptional results.

CHAPTER 1

COMPANY PROFILE

1. COMPANY PROFILE

A Brief History of Compsoft Technology

Compsoft Technology, was incorporated with a goal "To provide high quality and optimal Technological Solutions to business requirements of our clients". Every business is a different and has a unique business model and so are the technological requirements. They understand this and hence the solutions provided to these requirements are different as well. They focus on clients requirements and provide them with tailor made technological solutions. They also understand that Reach of their Product to its targeted market or the automation of the existing process into e-client and simple process are the key features that our clients desire from Technological Solution they are looking for and these are the features that we focus on while designing the solutions for their clients.

Compsoft Technology is a Technology Organization providing solutions for all web design and development, MYSQL, PYTHON Programming, HTML, CSS, ASP.NET and LINQ. Meeting the ever increasing automation requirements, Sarvamoola Software Services. specialize in ERP, Connectivity, SEO Services, Conference Management, effective web promotion and tailor-made software products, designing solutions best suiting clients requirements.

Compsoft Technology, strive to be the front runner in creativity and innovation in software development through their well-researched expertise and establish it as an out of the box software development company in Bangalore, India. As a software development company, they translate this software development expertise into value for their customers through their professional solutions.

They understand that the best desired output can be achieved only by understanding the clients demand better. Compsoft Technology work with their clients and help them to define their exact solution requirement. Sometimes even they wonder that they have completely redefined their solution or new application requirement during the brainstorming session, and here they position themselves as an IT solutions consulting group comprising of high caliber consultants.

They believe that Technology when used properly can help any business to scale and achieve new heights of success. It helps Improve its efficiency, profitability, reliability; to put it in one sentence " Technology helps you to Delight your Customers" and that is what we want to achieve.

CHAPTER 2

ABOUT THE COMPANY

2. ABOUT THE COMPANY

Compsoft Technology is a Technology Organization providing solutions for all web design and development, MYSQL, PYTHON Programming, HTML, CSS, ASP.NET and LINQ. Meeting the ever increasing automation requirements, Varcons Technologies specialize in ERP, Connectivity, SEO Services, Conference Management, effective web promotion and tailor-made software products, designing solutions best suiting clients requirements. The organization where they have a right mix of professionals as a stakeholders to help us serve our clients with best of our capability and with at par industry standards. They have young, enthusiastic, passionate and creative Professionals to develop technological innovations in the field of Mobile technologies, Web applications as well as Business and Enterprise solution. Motto of our organization is to “Collaborate with our clients to provide them with best Technological solution hence creating Good Present and Better Future for our client which will bring a cascading a positive effect in their business shape as well”. Providing a Complete suite of technical solutions is not just our tag line, it is Our Vision for Our Clients and for Us, We strive hard to achieve it.

Products of Company

Android Apps

It is the process by which new applications are created for devices running the Android operating system. Applications are usually developed in Java (and/or Kotlin; or other such option) programming language using the Android software development kit (SDK), but other development environments are also available, some such as Kotlin support the exact same Android APIs (and bytecode), while others such as Go have restricted API access.

The Android software development kit includes a comprehensive set of development tools. These include a debugger, libraries, a handset emulator based on QEMU, documentation, sample code, and tutorials. Currently supported development platforms include computers running Linux (any modern desktop Linux distribution), Mac OS X 10.5.8 or later, and Windows 7 or later. As of March 2015, the SDK is not available on Android itself, but software development is possible by using specialized Android applications.

Web Application

It is a client–server computer program in which the client (including the user interface and client- side logic) runs in a web browser. Common web applications include web mail, online

retail sales, online auctions, wikis, instant messaging services and many other functions. web applications use web documents written in a standard format such as HTML and JavaScript, which are supported by a variety of web browsers. Web applications can be considered as a specific variant of client–server software where the client software is downloaded to the client machine when visiting the relevant web page, using standard procedures such as HTTP. The Client web software updates may happen each time the web page is visited. During the session, the web browser interprets and displays the pages, and acts as the universal client for any web application. The use of web application frameworks can often reduce the number of errors in a program, both by making the code simpler, and by allowing one team to concentrate on the framework while another focuses on a specified use case. In applications which are exposed to constant hacking attempts on the Internet, security-related problems can be caused by errors in the program.

Frameworks can also promote the use of best practices such as GET after POST. There are some who view a web application as a two-tier architecture. This can be a “smart” client that performs all the work and queries a “dumb” server, or a “dumb” client that relies on a “smart” server. The client would handle the presentation tier, the server would have the database (storage tier), and the business logic (application tier) would be on one of them or on both. While this increases the scalability of the applications and separates the display and the database, it still doesn’t allow for true specialization of layers, so most applications will outgrow this model. An emerging strategy for application software companies is to provide web access to software previously distributed as local applications. Depending on the type of application, it may require the development of an entirely different browser-based interface, or merely adapting an existing application to use different presentation technology. These programs allow the user to pay a monthly or yearly fee for use of a software application without having to install it on a local hard drive. A company which follows this strategy is known as an application service provider (ASP), and ASPs are currently receiving much attention in the software industry.

Security breaches on these kinds of applications are a major concern because it can involve both enterprise information and private customer data. Protecting these assets is an important part of any web application and there are some key operational areas that must be included in the development process. This includes processes for authentication, authorization, asset handling, input, and logging and auditing. Building security into the applications from the beginning can be more effective and less disruptive in the long run.

Web design

It is encompasses many different skills and disciplines in the production and maintenance of websites. The different areas of web design include web graphic design; interface design; authoring, including standardized code and proprietary software; user experience design; and

search engine optimization. The term web design is normally used to describe the design process relating to the front-end (client side) design of a website including writing mark up. Web design partially overlaps web engineering in the broader scope of web development. Web designers are expected to have an awareness of usability and if their role involves creating mark up then they are also expected to be up to date with web accessibility guidelines. Web design partially overlaps web engineering in the broader scope of web development.

Departments and services offered

Compsoft Technology plays an essential role as an institute, the level of education, development of student's skills are based on their trainers. If you do not have a good mentor then you may lag in many things from others and that is why we at Compsoft Technologies gives you the facility of skilled employees so that you do not feel unsecured about the academics. Personality development and academic status are some of those things which lie on mentor's hands. If you are trained well then you can do well in your future and knowing its importance of Compsoft Technologies always tries to give you the best.

They have a great team of skilled mentors who are always ready to direct their trainees in the best possible way they can and to ensure the skills of mentors we held many skill development programs as well so that each and every mentor can develop their own skills with the demands of the companies so that they can prepare a complete packaged trainee.

Services provided by the Company

- Core Java and Advanced Java
- Web services and development
- Dot Net Framework
- Python
- Selenium Testing
- Conference / Event Management Service
- Academic Project Guidance
- On The Job Training
- Software Training

CHAPTER 3

INTRODUCTION

3. INTRODUCTION

Introduction to Web Apps

Web applications are similar to the traditional applications you'd install on your Information, such as Microsoft Office. They are able to perform the same kinds of tasks, they look the same and they feel the same but there is one key difference - the application itself is not installed on your phone or Information, but lives in the cloud. Web apps are not new, but it used to be that they were often unable to compete with more traditional applications for business critical functions or where rich user interaction was required. This is no longer the case. With the power of modern web technologies, we are able to design and build performing, secure, and feature rich applications that live in the cloud and bring with them a huge number of benefits.

1. They can be accessed from anywhere.

- Because web applications are built with web technologies and they run in a web browser Internet Explorer, Google Chrome, Mozilla Firefox – this allows them to be accessed from every web enabled tool. As long as you have an internet connection you can use them.
- It allows for remote working, it allows for rapid publishing of content, it allows for real time collaboration between teams. If you have web access, you have the ability to access your business tools.

2. They are cost effective.

- Web applications are cheaper to produce and maintain than traditional applications. No matter how many platforms your business uses (Mac, Linux, Windows) web application build can be used across them all.

3. They benefit from more rapid update cycles.

- A huge benefit of web applications is that when an update is released, all of your users are immediately using that version. This doesn't happen with installed applications, especially in large organizations with IT policies that restrict administrator access.

4. They are secure.

- Web developers have had to become experts in security – the web is a platform designed to share everything with everyone! As such, the types and levels of security included in web applications are often far greater than those seen in traditional applications.

- They also benefit from the ability to launch updates in real-time – the application on the servers is the application people are using. The applications on people's laptops however is the version last installed. And when those laptops get left on a train it's not a concern, as nothing is stored locally.

5. They enable more computing with fewer Information.

- Web applications push all of the hard work to the servers, and act as intermediaries between the user interface and the calculations happening behind the scenes. This means you can accomplish terrifyingly complex work on a tablet, or your phone.
- We've built web applications that allow people to understand the complex relationships between 250,000 pieces of art on their phones, and applications that run the business systems of one of the largest solar energy providers in the world. Often these products are not financially viable to build using traditional application processes.

Problem Statement as mentioned in the proposal

Develop an application which facilitates creation of web pages having a need to install any HTML editor based software and also which can be used by any novice user (no HTML knowledge needed) that is developing web pages on the online. This module is designed to reduce the process involved in managing the activity of customers and business where the business can sell their services and the customers can buy those.

CHAPTER 4

SYSTEM ANALYSIS

4. SYSTEM ANALYSIS

1. Existing System

The current Event Planning Service operates as a rudimentary online platform designed to facilitate event bookings and basic administrative functions. Users, comprising individuals and organizations, can access the platform to book various types of events, including birthdays, weddings, corporate events, and more. Here is an overview of the existing system:

User Registration and Event Booking:

- **User Registration:** Users are required to create accounts on the platform by providing personal information, including names, contact details, and login credentials (username and password).
- **Event Booking:** After registration, users can browse through the available event categories and select the type of event they wish to host. They fill out event details such as date, time, venue, and any specific requirements.
- **Booking Confirmation:** Upon submitting a booking request, users receive a confirmation notification via email or on the platform. However, there is no real-time availability check, and conflicts may arise.

User Management:

4. **Edit and Delete Data:** Users have limited control over their event data. They can edit certain event details but cannot delete events once booked. This limitation can be frustrating for users who may need to make changes or cancel their events.

Admin Features:

5. **Admin Dashboard:** The platform provides a basic admin dashboard allowing administrators to view a list of booked events, along with user contact information. However, this dashboard lacks real-time updates and advanced filtering options.

- **Manual Event Deletion:** Admins can manually delete event entries once an event has concluded. This process is time-consuming and relies heavily on manual oversight.

Issues and Limitations:

7. **Lack of Real-time Updates:** The existing system lacks real-time updates, leading to potential booking conflicts and delayed event information.

- **User Data Management:** Users' inability to delete their own events can lead to cluttered records and extra work for administrators.
- **Limited Admin Functionality:** The admin dashboard lacks advanced features for efficient event management, reporting, or analytics.
- **Security Concerns:** The system needs to improve data security to safeguard user and event information.

2. Proposed System

The proposed system represents a comprehensive overhaul and enhancement of the existing Event Planning Service. It aims to provide users with a seamless and feature-rich experience while offering administrators advanced tools for efficient event management. Here are the key features of the proposed system:

User Registration and Event Booking:

- **User-Friendly Registration:** Users can register easily with minimal required information. Social media login options can also be added for convenience.
- **Event Booking:** The booking process will be user-friendly, with real-time availability checks to prevent double bookings. Users can select event categories, venues, and additional services with ease.
- **Booking Management:** Users will have full control over their booked events, allowing them to edit event details, including date, time, and venue, or cancel events when necessary.

User Dashboard:

4. User Dashboard: Each user will have access to a personalized dashboard where they can view all their booked events, make modifications, and track payments.

Admin Features:

5. Comprehensive Admin Dashboard: The admin dashboard will feature advanced event management tools. Admins can view, edit, or cancel events, track payments, and generate reports for better decision-making.

- **Real-time Updates:** Admins will receive real-time notifications and updates on new bookings, changes, and cancellations, ensuring efficient event oversight.

Data Security:

7. Enhanced Data Security: Robust data encryption and security protocols will be implemented to protect user and event data from unauthorized access.

Reporting and Analytics:

8. Analytics Module: The system will include an analytics module that allows administrators to track key performance indicators, user engagement, and revenue generation. This data-driven approach will inform business strategies and improvements.

User Support:

9. Customer Support: A dedicated customer support system, such as live chat or email, will be available to assist users with their inquiries or issues.

Scalability and Performance:

10. Scalability: The system will be designed to handle increased loads as the user base grows, ensuring consistently high performance.

Mobile App: Consider developing a mobile app for added convenience, enabling users to access and manage their events on the go.

User Feedback and Continuous Improvement:

11. Feedback Mechanism: Implement a feedback mechanism to collect user suggestions and experiences, enabling ongoing improvements to the system.

3. Objective of the System

Certainly, here are the objectives of the proposed Event Planning Service system:

Objectives of the Event Planning Service System

- **Enhance User Experience:** The primary objective of the system is to provide a user-friendly and efficient platform for event planning. This includes simplifying the registration process, streamlining event booking, and offering users the ability to manage and modify their bookings with ease.
- **Real-time Booking and Availability:** Implement a real-time booking and availability checking system to prevent conflicts and double bookings, ensuring a smoother booking experience for users.
- **Advanced Admin Tools:** Provide administrators with comprehensive tools and a real-time dashboard for efficient event management, including event tracking, editing, and cancellation.
- **Data Security:** Ensure the security and confidentiality of user and event data through robust encryption and access control measures.
- **Analytics and Reporting:** Develop an analytics module to generate insights from user and event data, enabling data-driven decision-making and business strategy improvements.
- **Scalability:** Design the system to be scalable, capable of handling increased user traffic and event bookings as the platform grows.
- **Mobile Accessibility:** Consider the development of a mobile application to offer users the convenience of accessing and managing their events on smartphones and tablets.
- **Customer Support:** Establish a customer support system to assist users with inquiries, issues, and feedback, fostering a positive user experience.
- **Feedback Mechanism:** Implement a user feedback mechanism to gather user suggestions and experiences, facilitating continuous improvement and refinement of the system.
- **Revenue Generation:** Enable multiple revenue streams, such as event booking fees, premium features, and advertising opportunities, to support the sustainability and growth of the platform.
- **Business Growth:** Support the expansion of the Event Planning Service, reaching a broader user base and increasing event bookings.
- **Long-term Sustainability:** Develop a system architecture that can adapt to changing technologies and user needs, ensuring the long-term sustainability of the service

Admin Features:

5. Comprehensive Admin Dashboard: The admin dashboard will feature advanced event management tools. Admins can view, edit, or cancel events, track payments, and generate reports for better decision-making.

- **Real-time Updates:** Admins will receive real-time notifications and updates on new bookings, changes, and cancellations, ensuring efficient event oversight.

Data Security:

7. Enhanced Data Security: Robust data encryption and security protocols will be implemented to protect user and event data from unauthorized access.

CHAPTER 5

REQUIREMENT ANALYSIS

5. REQUIREMENT ANALYSIS

Hardware Requirement Specification

- MySQL
- JS
- Flask
- Notepad++ Editor
- Processor: Intel core i5 processor
- Memory: 15.6 GB
- Hard Disk: 40 GB

Software Requirement Specification

A] Functional Requirements

- User Registration and Authentication:
- Event Booking and Management
- Admin Features
- Analytics and Reporting
- Scalability and Performance

B] Non-Functional Requirements

- **Availability**

The online registration system shall permit backing up of the registration database while other registration activities are going on.

- **Accessibility**

The system shall be accessible by people with specific vision needs to the extent that a user shall be able to display the whole user interface in a larger font without truncating displayed text or other values.

- **Security**

The access permissions for system data may only be changed by the systems data administrator passwords shall never be viewable at the point of entry or any other time.

CHAPTER 6

DESIGN ANALYSIS

6. DESIGN & ANALYSIS

Design and analysis are crucial phases in the development of the Event Planning Service system. These phases involve defining the system's architecture, structure, and how it will meet the specified requirements.

1. System Architecture:

- Define the overall system architecture, including client-server or cloud-based architecture.
- Choose appropriate technologies and frameworks for development.

2. Database Design:

- Design a relational database schema to store user data, event details, bookings, and admin information.
- Define data tables, relationships, and constraints.

3.. Use Case Analysis:

- Develop detailed use cases to describe how users interact with the system.
- Identify main use cases such as user registration, event booking, and admin event management.

4. Data Flow Diagrams (DFDs):

- Create DFDs to visualize data flow within the system, from user input to database storage and back to user outputs.

5. System Components:

- Break down the system into modular components, such as user authentication, event booking, admin dashboard, notifications, and analytics.

6. Security Design:

- Define security measures, including authentication and authorization protocols.
- Plan for data encryption, secure APIs, and access controls.

7. Performance Analysis:

- Conduct performance analysis to ensure the system can handle expected loads.
- Implement caching, load balancing, and optimization techniques as needed.

8. Third-Party Integrations:

- Identify third-party services or APIs that need to be integrated, such as payment gateways or messaging services.

CHAPTER 7

IMPLEMENTATION

7. IMPLEMENTATION

Implementation is the stage where the theoretical design is turned into a working system. The most crucial stage in achieving a new successful system and in giving confidence on the new system for the users that it will work efficiently and effectively.

The system can be implemented only after thorough testing is done and if it is found to work according to the specification. It involves careful planning, investigation of the current system and its constraints on implementation, design of methods to achieve the change over and an evaluation of change over methods apart from planning.

Two major tasks of preparing the implementation are education and training of the users and testing of the system. The more complex the system being implemented, the more involved will be the system analysis and design effort required just for implementation.

The implementation phase comprises several activities. The required hardware and software acquisition is carried out. The system may require some software to be developed. For this, programs are written and tested. The user then changes over to his new fully tested system and the old system is discontinued.

TESTING

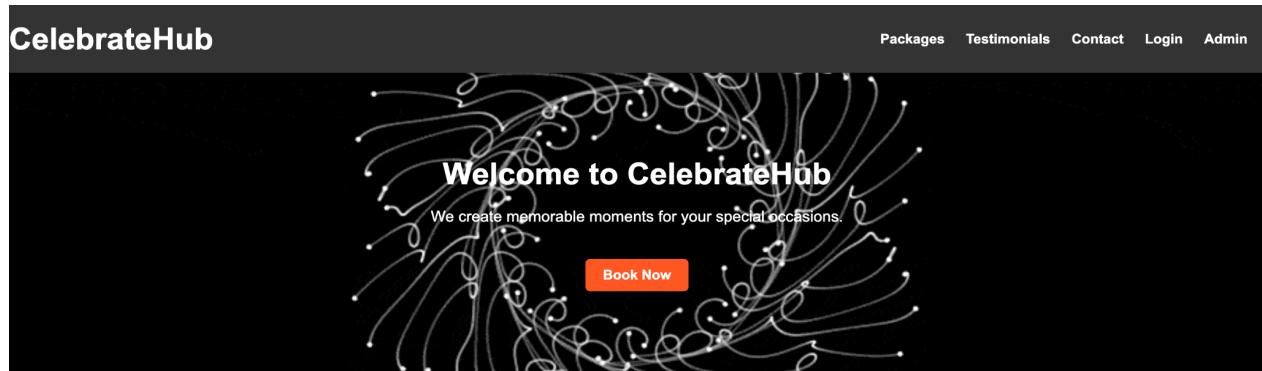

The testing phase is an important part of software development. It is the Information zed system will help in automating the process of finding errors and missing operations and also a complete verification to determine whether the objectives are met and the user requirements are satisfied. Software testing is carried out in three steps:

1. The first includes unit testing, where each module is tested to provide its correctness, validity and also determine any missing operations and to verify whether the objectives have been met. Errors are noted down and corrected immediately.
2. Unit testing is the important and major part of the project. So errors are rectified easily in particular modules and program clarity is increased. In this project the entire system is divided into several modules and is developed individually. So unit testing is conducted to individual modules.
3. The second step includes Integration testing. It need not be the case, the software whose modules when run individually and showing perfect results, will also show perfect results when run as a whole.

CHAPTER 9

CONCLUSION

9. CONCLUSION

- ❖ the development of our Event Management Service represents a significant step towards revolutionizing the event planning industry. By meticulously analyzing the existing system and defining a robust set of functional requirements, we have paved the way for the creation of a cutting-edge platform that caters to the diverse needs of our users.
- ❖ The proposed system, with its user-friendly interface, real-time booking capabilities, advanced admin tools, and robust security measures, promises to provide an exceptional user experience. We are committed to enhancing the way events are planned, booked, and managed, making it easier and more efficient for both event hosts and administrators.
- ❖ The objectives set forth for this project are clear: to improve user satisfaction, streamline event management, generate revenue, and support the long-term growth and sustainability of our Event Management Service. With scalability, data-driven decision-making, and continuous improvement at the core of our strategy, we are poised to meet and exceed these objectives.
- ❖ As we move forward into the design and analysis phases, our focus will be on translating these goals into a concrete system that not only meets but exceeds user expectations. Through meticulous planning, adherence to best practices, and a commitment to excellence, we aim to deliver a platform that transforms the way events are planned and executed, leaving a lasting impact on the industry and the experiences of our users. Together, we look forward to shaping the future of event management.
